Chris Lee

Delta Bus Consultancy Designing for Buses in the Urban Environment

Chris is the owner of Delta Bus Consultancy, is a Chartered Member of the Institute of Logistics and Transport (CMILT) and has nearly 20 years designing infrastructure for the bus industry.
Chris joined TfL in 2007 and led a team of 12 project managers who handled TfL's portfolio of 50 bus stations and 150 bus stands. The team handled around 12 projects annually requiring any of design and construction, maintenance or alteration. Chris was involved in the largest projects including completion of Hammersmith Upper Level bus station, moving London Bridge station to accommodate the Shard, and reconfiguring Victoria Bus station to allow for an underground extension.
Having left TfL he qualified as a bus transport manager and then a bus driver and formed Delta Bus Consultancy (Deltabus). Deltabus could now assist local councils and infrastructure designers with specialised skills and knowledge of bus infrastructure design from all of the designers', operators' and bus drivers' perspectives.

Why this course has been developed

Chris realised that most local councils wouldn't have the bus infrastructure resources that TfL had. In most cases, the local authority expert was a former bus driver close to retirement - knowledge and experience that would soon be lost forever.
He teamed up with PTRC to create the course "Designing for Buses in the Urban Environment", which gives new or inexperienced bus infrastructure designers an insight into the bus industry. A course providing them with enough knowledge and understanding of the bus industry – the space buses need, and the needs of the drivers, operators and public - to allow them to spot and rectify the most common design issues. So whether you're new to the bus industry or have years of experience, you can be guaranteed to come away with a lasting insight into some of all parts of the course.
